

December 2025

Max. Marks: 100

8. **What is the primary purpose of security monitoring in cloud computing?**
 A) To increase the speed of data processing in the cloud
 B) To ensure compliance with government regulations
 C) To detect, analyze, and respond to security threats in real-time
 D) To optimize resource allocation and reduce costs
9. **Which AWS service allows you to launch and manage virtual servers in the cloud?**
 A) AWS VPC
 B) AWS EC2
 C) AWS Cloud Formation
 D) AWS Route 53
10. **What is one of the main advantages of using MaaS (Monitoring as a Service) in a cloud environment?**
 A) It allows organizations to implement customized software without vendor assistance.
 B) It eliminates the need for any in-house IT security expertise.
 C) It provides continuous, real-time insights into potential security threats across multiple cloud environments.
 D) It guarantees 100% protection against all cyber threats.
11. _____ computing refers to applications and services that run on a distributed network using virtualized resources.
 A) Distributed
 B) Cloud
 C) Soft
 D) Parallel
12. _____ as a utility is a dream that dates from the beginning of the computing industry itself.
 A) Model
 B) Computing
 C) Software
 D) Hardware
13. _____ refers to a device that is completely dependent on some other system for its complete functionality.
 A) Thick client
 B) Fat client
 C) Hypervisor
 D) Thin client
14. _____ has many of the characteristics of what is now being called cloud computing.
 A) Internet
 B) Software
 C) Web Service
 D) Hardware
15. **Which of the following can be identified as cloud?**
 A) Microsoft word
 B) AWS
 C) Ubuntu
 D) Super Computer
16. **SLA stands for**
 A) Service Lowering Associations
 B) Software Level Agents
 C) Service Level Agreements
 D) Software Level Associations
17. **Which of the following cloud concept is related to pooling and sharing of resources?.**
 A) Polymorphism
 B) Abstraction
 C) Virtualization
 D) Distributed
18. _____ is a technique that allows to share single physical instance of an application or resource among multiple organizations or tenants (customers).
 A) Consolidation
 B) Anonymization
 C) Virtualization
 D) Pooling
19. In a _____ virtualization, the VMM communicates directly with system hardware rather than relying on a host operating system.
 A) Bare-metal
 B) Hybrid
 C) Storage
 D) Hosted

20. Which of the following is an example of Hosted virtualization hypervisors?

- A) BeeTa
B) Oracle DB
C) Microsoft Word
D) Oracle Virtual Box

PART - B: DESCRIPTIVE ANSWER QUESTIONS

Unit – I		Marks	BT*	CO*	PO*
1.	a) Illustrate how shared-memory and distributed-memory MIMD systems operate with suitable diagram.	8	L*2	1	1
	b) Discuss the major open challenges in cloud computing.	4	L2	2	1
	c) Differentiate Parallel and Distributed Computing.	4	L2	2	1
2.	a) Explain the working of the RPC reference model with the help of a neat diagram, and describe how it enables communication between distributed processes.	6	L2	1	1
	b) Explain the candidate sectors for community cloud and benefits of Community Cloud.	10	L2	2	1
3.	a) Interpret the Call and Return architectural styles in Distributed Computing.	6	L2	1	1
	b) Illustrate Cloud Computing Architecture with a neat diagram.	10	L2	2	1
Unit – II					
4.	a) Explain Programming – Language - Level Virtualization and Application-Level Virtualization.	6	L2	3	1
	b) Demonstrate the activities of risk management stages and activities.	10	L3	4	1
5.	a) Discuss type1 and type2 hypervisors and hypervisor reference architecture with a suitable diagram.	8	L3	3	1
	b) Explain the best practices across the cloud community.	8	L2	4	1
6.	a) Relate the concepts of Para Virtualization architecture to Xen Architecture.	8	L2	3	1
	b) Outline the security concerns in cloud computing.	8	L2	4	1
Unit – III					
7.	a) Explain Security monitoring and security feedback.	5	L2	4	1
	b) Explain the available configurations for EC2 instances.	6	L2	5	1
	c) Outline the application services of Google AppEngine.	5	L2	5	1
8.	a) Explain the purpose of security monitoring in cloud computing.	5	L2	4	1
	b) Demonstrate the implementation of security monitoring in cloud infrastructure.	6	L2	4	1
	c) Explain the key features and services of Microsoft Azure.	5	L2	5	1

BT* Bloom's Taxonomy, L* Level; CO* Course Outcome; PO* Program Outcome.
