

Second Semester M.Tech (Electric Vehicle Technology) (CBCS) Degree Examinations

22EVT232 – AUTOMOTIVE SECURITY

Max. Marks: 100

One full question from **Unit – III.**

Marks	BT*	CO*	PO*
-------	-----	-----	-----

- | | | | | | | |
|----|----|---|----|----|---|-----|
| 3. | a) | Explain the Diffie–Hellman Key Exchange algorithm used in Secure Network. | 10 | L3 | 2 | 1,2 |
| | b) | Explain the RSA algorithm of Public key Cryptography. | 10 | L1 | 1 | 1,2 |

4.	a)	Explain the Authenticating Remote Automotive Peripherals Using GMSL Tunneling.	10	L3	4	1,2
----	----	--	----	----	---	-----

- | | | | | | | |
|----|----|--|----|----|---|-----|
| 5. | a) | Elliptical Curve Cryptography (ECC) algorithm used in Security IC. ATECC608A | 10 | L3 | 3 | 1,2 |
|----|----|--|----|----|---|-----|

7.	a)	Explain the process of protect and detect in firmware authentication using CEC1712	10	L3	5	1,2
----	----	--	----	----	---	-----

- | | | | | | | |
|----|----|---|----|----|---|-----|
| 8. | a) | Explain the root of trust and chain of trust properties in firmware Resiliency. | 10 | L3 | 5 | 1,2 |
| | b) | Describe the features of over the air attestation for firmware. | 10 | L3 | 5 | 1,2 |
