

IS2001-1 – INTERNET & WEB PROGRAMMING
(ISE)

Max. Marks: 100

Part – A: Multiple Choice Questions: Answer all **Twenty** questions in the **OMR Sheet** provided. Each question carries equal marks.

Part – B: Descriptive Answer Questions: Answer **Five full** questions choosing **Two full** questions from **Unit – I & Unit – II each** and **One full** question from **Unit – III**.

20 Marks

- Which tag is used to define the body of an HTML document?
A) header
B) Body
C) footer
D) div
- What does CSS stand for?
A) Computer Style Sheets
B) Creative Style Sheets
C) Colorful Style Sheets
D) Cascading Style Sheets
- Which HTML tag is used to define an internal style sheet?
A) script
B) css
C) style
D) link
- Which statement declares a constant in JavaScript?
A) var constantName = value;
B) let constantName = value
C) constant constantName = value
D) const constantName = value
- How do you write a "Hello World" alert box in JavaScript?
A) alertBox("Hello World");
B) msg("Hello World");
C) alert("Hello World");
D) msgBox("Hello World");
- In PHP, which superglobal array holds data of forms submitted via the POST method?
A) \$_GET
B) \$_POST
C) \$_REQUEST
D) \$_SESSION
- What is JSX in React?
A) JavaScript Style XML
B) JavaScript Syntax Extension
C) Java Syntax XML
D) JavaScript Secure XML
- Which hook is used in React to manage state in a functional component?
A) useState
B) useEffect
C) useContext
D) useReducer
- Which method is used to create a server in Node.js?
A) http.createServer()
B) node.createServer()
C) server.create()
D) http.makeServer()
- What does MongoDB return when a query does not find any matching document?
A) null
B) undefined
C) 0
D) An empty array
- Which HTML element is used to create a web form?
A) Form
B) input
C) fieldset
D) label
- Which attribute in an <input> element defines the type of control to display?
A) Type
B) Control
C) Element
D) display

13. Which attribute is used to specify that an input field must be filled out?
 A) Placeholder B) Required
 C) Validate D) mandatory
14. What is the purpose of the <meta> tag in HTML?
 A) Linking CSS and JavaScript files B) Defining the character set, page description, keywords, author of the document, and viewport settings
 C) Creating forms D) Structuring the HTML document
15. Which attribute is important for making multimedia elements accessible?
 A) src B) Alt
 C) href D) title
16. Which Node.js middleware is commonly used for handling multipart/form-data, which is used for uploading files?
 A) Express B) BodyParser
 C) Multer D) Cors
17. In MongoDB, which method is used to insert a single document into a collection?
 A) db.collection.insertOne() B) db.collection.insert()
 C) db.collection.add() D) db.collection.create()
18. Which HTTP method is idempotent, meaning it can be called many times without different outcomes?
 A) POST B) GET
 C) DELETE D) PATCH
19. What is the correct syntax for referring to an external script called "xxx.js"?
 A) <script href="xxx.js"> B) <script name="xxx.js">
 C) <script src="xxx.js"> D) <script file="xxx.js">
20. Which SQL statement is used to insert new data into a database?
 A) ADD RECORD B) INSERT INTO
 C) CREATE RECORD D) INSERT NEW

PART - B: DESCRIPTIVE ANSWER QUESTIONS.

Unit – I

- | | Marks | BT* | CO* | PO* |
|---|-------|-----|-----|-----|
| 1. a) Describe the basic structure of an HTML document given the following requirements below. Also, explain the purpose of the <!DOCTYPE>, <html>, <head>, and <body> tags.
Create a simple HTML page that includes the use of headings, paragraphs, and lists. Your page should include at least one example of each heading level (<h1> through <h6>), a paragraph about why you are learning HTML, and an unordered list of at least three items that describe what you hope to achieve with your HTML skills. | 10 | 2 | 1 | 1 |
| b) Explain different attributes of <a> tag in detail. | 6 | 4 | 2 | 2 |
| 2. a) Create an HTML table that represents a schedule for a web development course. The table should include headers for the day of the week, the topic covered, and the instructor's name. Populate the table with data for a 5-day schedule, using appropriate HTML tags to structure your table correctly. | 8 | 3 | 1 | 1 |
| b) Demonstrate how to use CSS to style tables. Your answer should include CSS rules that apply a border, set the header background color, and adjust the padding of the cells in the table. | 8 | 3 | 1 | 2 |
| 3. a) Explain the process of embedding audio and video files into an HTML document. Include the tags used with suitable pseudocodes and the attributes that are essential for controlling playback features such as autoplay, loop, and controls. | 8 | 3 | 1 | 2 |

- b) Explain how CSS can be included in an HTML document. Describe the three methods of adding CSS (inline, internal, and external) and discuss the advantages and disadvantages of each with relevant examples.

8 2 2 1

Unit – II

4. a) Write a JavaScript function that takes two arguments (a base and an exponent) and returns the result of raising the base to the power of the exponent. Demonstrate error handling for invalid input types.

8 6 3 2

- b) Explain how PHP can be used to insert form data into a MySQL database. Provide an example PHP script that demonstrates inserting data from a simple contact form into a database table.

8 3 3 1

5. a) Discuss the importance of form validation in web applications and how it can be implemented in React. Include an example of validating a simple registration form with at least two fields (e.g., email and password) and display appropriate error messages to the user.

8 4 3 2

- b) Create a simple PHP script that generates a dynamic list of items from an array. The script should output an HTML unordered list () where each item in the array becomes a list item ().

8 3 3 1

6. a) Create a simple React component that displays a greeting message ("Hello, World!") and a current date using JSX. Include state or props in your example to demonstrate how data is managed within a component.

10 6 4 2

- b) Describe how to declare variables in JavaScript and explain the difference between var, let, and const. Provide examples to illustrate your points.

6 3 2 1

Unit – III

7. a) Write a simple Node.js server that listens on port 8080 and responds with "Hello, World!" to all GET requests. Include comments to describe the purpose of each part of the script.

8 3 4 2

- b) What is MongoDB, and how does it differ from traditional relational databases? Highlight its schema-less nature and the basic structure of data storage in MongoDB.

8 2 5 2

8. a) Describe the process of handling file uploads in a Node.js application. What are the key considerations when setting up a server to accept file uploads?

8 3 4 1

- b) Provide an example of storing file metadata in a MongoDB collection after uploading a file in Node.js. Include the steps to insert file metadata (e.g., file name, size, and type) into the collection after a successful upload.

8 3 5 1
